Backup Callout Tutorial

This tutorial will cover the steps required to configure a Link system to be able to perform callouts on a back-up module in the event that the primary module fails.

Launch the Link Configuration Software, press the 'Add/Remove' button in the 'Hardware' section and add the two callout modules. In this example, the T1 and W3 modules will be used:

BE Add / Remove Mo		×	
Module Address	Module Type		
0	B1285-M1	•	
1	B1285-T1	•	
2	B1285-W3	•	
3	empty	•	
4	empty	-	
5	empty	-	
6	empty	-	
7	empty	-	
8	empty	-	
9	empty	-	
10 (A)	empty	-	
11 (B)	empty	-	
12 (C)	empty	-	
13 (D)	empty	-	
14 (E)	empty	-	
15 (F)	empty	-	
Help	OK		Cancel

Next, press the 'Operation' button:

😑 ProTalk LINK Database E	iditor -	1 (5

Backup Callout Tutorial

Since the T1 was set to address one, it automatically becomes the primary callout device. The W3 then becomes the backup device in the event that the T1 fails. To change this to be the opposite, simply change the modules accordingly in the drop-down-box in the upper right-hand corner of the window:

BE ProTalk LINK Database	Editor - D:\B1285A\Test Proced	lure\A1 Voltage (5V) Test [B.DAT		
<u>F</u> ile Hard <u>w</u> are <u>O</u> perati	on <u>C</u> onnect <u>H</u> elp				
🖻 🖬 🚊 📲 🔌	0 🗊 🔪	Quick	. setup check list. Press STA	ART to begin.	👻 🚝 START
1 HARDWARE 2 OPERATION 3 CONNECT Image: Solution of the second	General Properties Miscellaneous Alam Announcement: Temporary Ack Time: Relay Voices: Security Level: Access Code: Sender's Email Address: [my_phone#@pcs.rogers]	memory used: 0%	Phone B1285 Radio B1285	mary ₩/3 (2) ▼ -T1 (1) ▼ ₩/3 (2) ▼	Backup B1285-T1 (1) • B1285-W3 (2) • disabled • 111

Radio callouts will always use the T1 module and SMS text messages will always use the wireless module, irrespective of what the primary or backup modules are set to.
